

T8 led tube with 150 degree illumination

MT8 led tube with 150 degree illumination

The new MT8 led tube from Signcomplex replaces existing T8 and T12 fluorescent tubes and can be easily installed in the same place. The degree of illumination is new considerable 150 degrees and is available in the lengths 60cm, 120cm as well as 150cm.

The voltage input is 100-277 vac 50/60 Hz and the Power at 9W/18W/22W respectively. The Power Factor PF is larger than 0.92. This led component has the known advantages such as: Much longer service life, 70-80 percent less energy demand than CFL tubes, high shock resistance, no flickering, easy assembly, low heat development and much more. Areas of application include offices and residential buildings, park and warehouses, railways and vehicles of all kinds.
